

February 2011

Dear Reader:

I am pleased to present this Standard of Response Cover document, originally adopted December 13, 2005 by the Lynchburg City Council and updated in February 2011. The product of over many years of work by fire department staff and other City staff, this document presents a comprehensive risk assessment document for the City and attempts to identify the distribution and concentration of resources throughout the fire department's service area.

This document is designed to serve as a basis for the development of standard operating procedures and guidelines for the daily operations of the organization in the delivery of emergency services.

My many thanks to all those who assisted in the preparation of this Standard of Response Cover document.

Sincerely,

S. Brad Ferguson, Fire Chief  
Lynchburg Fire Department
